

**GEOSCANNERS**  
advanced survey systems

# Geoscanners

## Swedish High Quality Standards

- Meticulous Quality Controls
- Everything is tested by highly experienced engineers

## Complete Geophysical Solutions

- Largest antenna selection on the market
- User-friendly software
- Support from data acquisition to the final report

# Core Values

## Quality

Quality and reliability are the cornerstones of Geoscanners production and lead the manufacturing process.

## GPR Solutions for the User

We at Geoscanners believe that products and technology should be adapted to the user and not the other way around.

## Sustainability

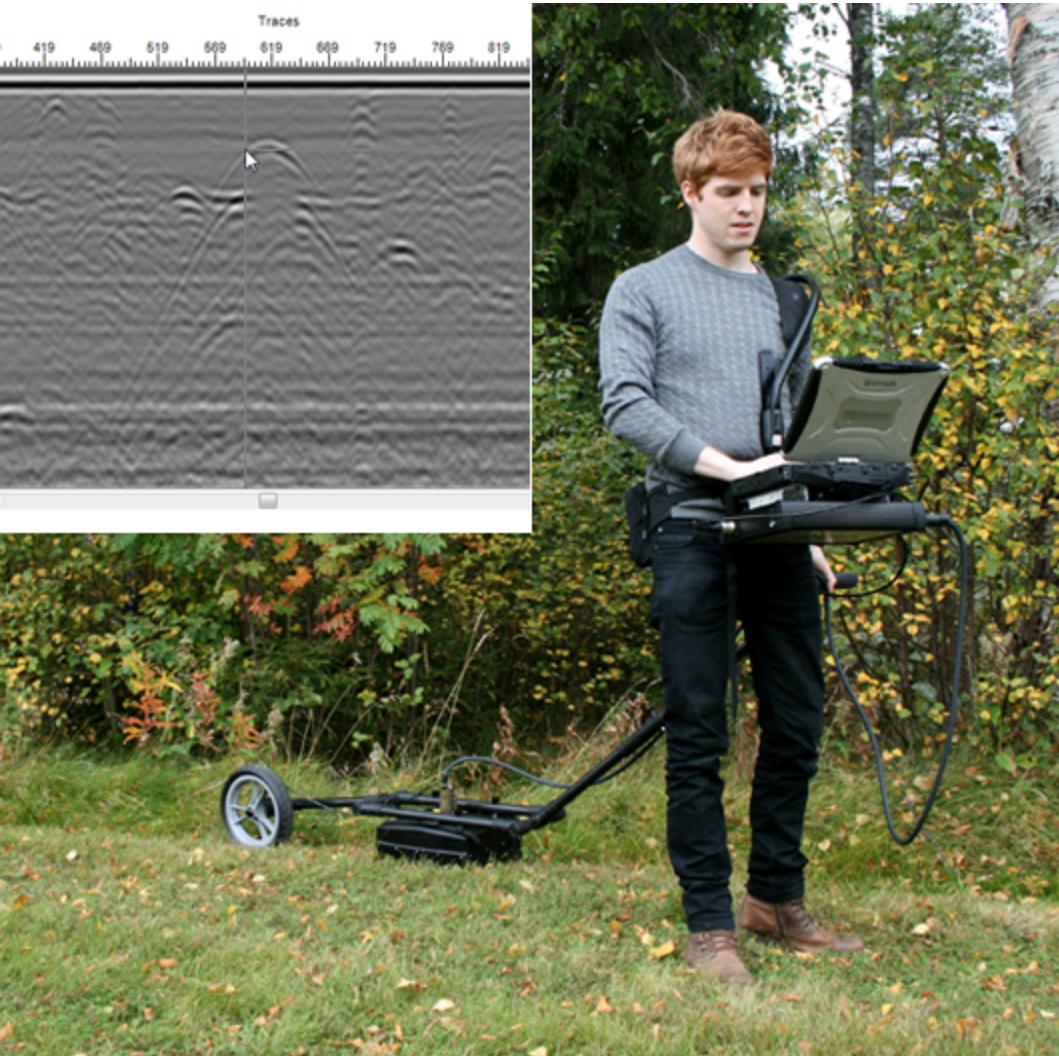

Products with a long lifetime is an important aspect in sustainable design. That is why Geoscanners provides a 3 year warranty and lifetime unit upgrades. Making products last is one of the steps towards making nature last.

# Endless Fields of Applications

- Systems for different types of surveys
- High scalability – buy products when needed and build upon your current system
- Antennas designed for specific applications as well as standardized antennas
- Urban and rural site conditions met with ease

# Geophysical Survey Solutions

## Complete Systems

- Ready to be used out of the box
- Computers with pre-installed Geoscanners software
- Scalable products – use the same base build with different antennas

# Largest Antenna Selection on the Market

# Ground Coupled Antennas

- From 100MHz to 2000MHz
- Lightweight
- Fully shielded

# Airborne Antennas

- Monostatic or Bistatic Mode
- Suitable for high-speed surveys or walking-speed surveys
- Best performance and least noise interference among airborne antennas

# Borehole Antennas

- 100, 500 or 1000MHz
- Light, waterproof and small dimensions
- Compatible with the Geoscanners standard radar control units

# Smart Antennas

- Improved communication protocol
- Automatic settings recall from the antenna memory
- Multiple frequency antennas

# Special Survey Antennas

- Multifrequency antennas
- Lightweight integrated radar antennas
- Wireless communication with the radar control unit

# Geoscanners Services

- Manufacturing
- Custom GPR-projects
- Training and education
- Survey services

# Research and Development

- Innovative solutions for a demanding market
- New products development
- Constant improvements to the current products

# Global Presence

- Resellers around the world
- Survey experiences from different countries and continents
- Units already present in more than 45 countries
- Multi-lingual software to meet the global demands
